About

My project is blood donation portal where user can book a slot for donating their blood. We are planning to use MONGODB as back-end in order to store all the user details, blood donation locations and the respective appointments for users.

Technology's Used

Html, Css

·ASP.NET MVC

MongoDB

Application Overview

01

Donors

02

Doctors

03

Admin

Donor

- Can Sign up account
- Login
